

Teaming up to achieve 35 bcm of sustainable biomethane by 2030

Biomethane Industrial Partnership

We increase the flow of sustainable biomethane produced in Europe!

The European Commission, Member States and industry leaders launched the Biomethane Industrial Partnership. This new partnership supports the implementation of the REPowerEU plan, including the target to increase annual production and use of biomethane to 35 bcm by 2030.

The need to scale up biomethane in Europe is more urgent than ever to reduce gas imports from Russia and to tackle the climate crisis.

Biomethane is the cheapest and most rapidly scalable renewable gas available today.

Get involved

Join the Biomethane Industrial Partnership to enable the production and uptake of sustainable biomethane in Europe.
