

BIOMETHANE RENEWABLE GAS MADE IN EUROPE

Learn more about the latest efforts of the Biomethane Industrial Partnership to support the achievement of 35 bcm biomethane target by 2030.

**Be part of
the change!**

Let's create a greener
& more sustainable
Europe together

ENABLING

Climate neutrality

ACHIEVING

Europe's clean
energy goals

ADVANCING

Europe's energy
independence

ADOPTING

Sustainable
agriculture practices

DISCOVER OUR LATEST WORK

How to reach the ambitious 35 bcm target by 2030? Discover the latest work of the Biomethane Industrial Partnership Task Forces and learn more about:

- The latest collaborative **efforts of the Member States** in developing biomethane
- The **2 newest BIP reports** on accelerating biomethane projects
- Explore the analysis on the **current biomethane costs** based on real industry data

Scan the QR code and download our latest studies, read more about ongoing research and stay up to date on future events.

Biomethane is replacing natural gas in various existing end uses:

*Feeling frosty?
Biomethane can be
used for sustainable
heat and electricity
production*

*Biomethane is suitable
as sustainable
transport fuel*

*Biomethane is a means
to enable climate
neutral industries*

About the Biomethane Industrial Partnership

The BIP is a private-public partnership comprising the **European Commission, Member States, industries, academia & civil society** who **team up** in several Task Forces to achieve 35 bcm biomethane by 2030.
